AUTHOR: Bobkov, T. M.; Moshkevich, Ye. M.; Gunaza, K. P.; Zlatkina, V. I.

TITLE: Effect of additions of rare-earth metals and their oxides on properties
of some stainless steels

SOURCE: Metallovedeniye i termicheskaya obrabotka metallov, no. 8, 1963, 55-59

TOPIC TAGS: stainless steel, Kh18NIOT steel, AISI 321 steel, Kh25NI8 steel,
AISI 310 steel, Kh17NI3M2T steel, AISI 316T steel, misch metal effect, ferro-
cerium effect, lanthanum effect, cerium dioxide effect, lanthanum oxide effect,
praseodymium oxide effect, steel hot ductility, steel structure, nonmetallic-
inclusion content, cast structure, ingot structureABSTRACT: The effect of addition of 0.05—0.35% misch metal [50% Ce, 25% La,
and 25% various rare-earth metals] or 0.05—0.4% ferrocetium, lanthanum,
cerium dioxide, lanthanum oxide, and praseodymium oxide on structure, phase
composition, amount of nonmetallic inclusions, room-temperature mechanical
properties, and hot ductility of Kh18NIOT [AISI 321], Kh25NI8 [AISI 310],
and Kh17NI3M2T [AISI 316] stainless steels has been investigated. None of

ACCESSION NR: AP3004789

the additions was found to have a significant effect on the crystal structure of ingots of any steel tested. The forged metal had a fine-grained structure with a low content of oxide and sulfide inclusions. A 0.15-0.25% addition of misch metal reduced the amount of carbonitride inclusions in all steels tested. Kh18NiOT steel containing 0.1% misch metal had improved hot ductility. In the Kh23Ni18 steel addition of 0.3 and 0.05% misch metal improved the ductility at 1100-1250 and 1000C, respectively. Addition of 0.05-0.15% misch metal or 0.15-0.30% La improved ductility of Kh17Ni3M2T steel at 1000C. Addition of ferrocerium, lanthanum², cerium³ dioxide, lanthanum or praseodymium² oxides brought about no improvement in hot ductility or room-temperature mechanical properties of Kh17Ni3M2T steel. Orig. artl has: 4 figures and 1 table.

TITLE:

An Investigation of the Dielectric Losses and the
Dielectric Constants of Several Forms of Ceramics in the
Super-high Frequency Range

PERIODICAL: Fizika tverdogo tela, 1960, Vol. 2, No. 10, pp. 2497-2504

TEXT: The authors give the results of measurement of ϵ and $\tan\delta$ in the frequency range of $7 \cdot 10^4 - 3.75 \cdot 10^{10}$ Hz and for temperatures between 20 - 500°C, for two steatite ceramics of the types CK-1 (SK-1) and TK-21 (TK-21), mullite-corundum ceramics of the type M-2 (M-2) and insulation porcelain of the type M-23 (M-23). Measurements at radio-frequencies were carried out with Q-meters of the types KB-1 (KV-1) and YK (UK). For measurements up to 10^{10} c, a resonator device (Fig. 1) having a cylindrical volume resonator developed at the VNIIIFTRI, was

used. For measurements carried out at high temperatures, the wave guide shown in Fig. 2 was used. In Fig. 3, ϵ and $\tan\delta$ are graphically represented as functions of the frequency for the materials investigated here. In Figs. 4-7, ϵ and $\tan\delta$ of the above mentioned materials are shown as functions of temperature for the frequencies $7 \cdot 10^4$, 10^7 , 10^6 , and 10^{10} c. It is found that in all materials ϵ decreases on transition from radiofrequencies to super-high frequencies and $\tan\delta$ increases. The increase of ϵ and $\tan\delta$ with an increase of temperature is considerably lower at 10^{10} c than at other frequencies. The degree of this change depends on the composition, and the kind of structure. There are 7 figures, 1 table, and 8 references: 7 Soviet and 1 US.

TITLE:

The Revision of Methodical Instructions Nr 88 (O
peresmotre metodicheskikh ukazaniy № 88)

PERIODICAL: Izmeritel'naya tekhnika, 1959, Nr 4, p 44 (USSR)

ABSTRACT: The Tekhnicheskoye upravleniye Komiteta standartov, mer i izmeritel'nykh priborov (Technical Directorate of the Committee of Standards, Measures and Measuring Instruments) revised the methodical instructions Nr 88 for the acceptance tests of potentiometric devices in 1957. In the author's opinion, several sections are now outdated and the methodical instructions should be revised as a whole. Presently, the Soviet industry produces potentiometers PPTV1 with voltage divider DNL, potentiometers P2/1 with voltage divider R-5, potentiometers R375 and potentiometers PPTN-1. Therefore, the methodical instructions should be especially adapted to these types. The author also points out typographical errors found in the last edition.

Card 1/2

The Revision of Methodical Instructions Nr 88 Sov/115-59-4-26/27

An editorial note says that the author's statements will be taken into consideration during the revision of the methodical instructions Nr 88 by VNIIK in 1959.

Mamuzić, Zlatko. La mesure (β) d'un groupe d'ensembles parfaits de points du segment $[0,1]$. Bull. Soc. Math. France, tome 81, n° 1-2, p. 43-48 (1953). Sert à C. Carathéodory.

The author gives a construction of a diffuse Lebesgue extension of the measure μ on the integers \mathbb{Z} to $[0,1]$, which is a perfect measure on $[0,1]$. See for example Hahn and Wintner, Measure and Integrals, Oxford, 1948, pp. 120-133 for the details of the fact that $\mathbb{Z}^{\mathbb{N}}$ is perfect in elementary. Furthermore $\mathbb{Z}^{\mathbb{N}}$ is open in $\mathbb{R}^{\mathbb{N}}$, $\mu(\mathbb{Z}) = \mu$.

TITLE: A Comparative Evaluation of the Efficacy of Measures to Combat Synanthropic Flies Using DDT, BCH and Chlorophos, and the Further Prospects in Destroying These Insects

PERIODICAL: Zhurnal mikrobiologii, epidemiologii i immunobiologii, 1959, Nr 6,
pp 66-73 (USSR)

ABSTRACT: Because of the disappointing effects of DDT and BCH in combatting flies in areas where these drugs have been used for a number of years, many authors maintain that the flies have developed a resistance to these agents (Derbenova-Ukhova, Morozova). Further, V.I. Vashkov, Pogodina and N.A. Sazonova maintain that the insecticidal properties of DDT and BCH vary with the climatic factors, the physical and chemical properties of the surface under treatment and the physiological condition of the insects. The present work gives the results of fly-clearance work carried out in different districts of Minsk by the Minskaya gorodskaya dezinfektsionnaya stantsiya (Minsk City Disinfection Station) using DDT, BCH and chlorophos. It was found that the combined use of one drug from

Using DDT, ECH and Chlorophos, and the Further Prospects in Destroying These Insects

each group (chlorine organic compounds, i.e. DDT, hexachlorane and phosphorous organic compounds, i.e. chlorophos, carbophos) considerably increased the effectiveness of the anti-fly campaign, especially in areas without sewage facilities. Identical results were obtained in all sections of the city. These underlined the need for adequate garbage disposal and proper sanitation and sewage facilities to make the anti-fly measures really successful.

Title : The task of the electrical industry is to create a new
electrical equipment for agriculture

Periodical : Elektrichestvo, 3, 1-4, Mr 1955

Abstract : The authors state that the rapid development of rural
electrification requires a constant improvement of
equipment. They enumerate achievements already obtained
and set the most important tasks to be solved in the very
near future. These include the production of vertical
water-wheel generators with a hollow shaft, equipped with
exciter (governor-feeding generator) and automatic voltage
regulator. Other developments include distribution
substations, outdoor equipment, aluminum and steel over-
head conductors, and economical underground cables with

Title : My Views and the Views of Leading Soviet Schools on the
Concept of Forest Typology.

Orig Pub : Sbor. Vysoké školy zeměd. a lesn. fak. Brno, 1956, C, No
4, 109-131.

Abstract : Analyzing the views of V.N. Sukachev and P.S. Pogrebnyak
on forest typology and contrasting them with his own,
the author concludes that for the conditions in which he
is working the principles upon which he bases his research
are more correct, and therefore they stand in no need of
correction or supplementation. For elaboration of his
own views on forest typology the author refers to his

Abstract: Extracts are presented from the report on the forest typology conference in December, 1954 of the assembled Czechoslovakian Academy of Agricultural Sciences. Various extreme tendencies in forest typology are critically examined. The admissability of methods of judging forest types either by investigating only permanent site properties, or only phytocenotic characteristics,
